At Compass Ironworks, we carry into the 21st century the Amish traditions that forged our artistic sensibilities: honesty, integrity, and dedication to family, community, and craft. We do no mass production here; every installation reflects your unique needs. We are master craftsmen who work with both traditional and 21st century tools. At the end of the day, we close the doors and leave our tools at the shop, not to be touched until the next workday begins.

For more information about Compass Ironworks, please contact us Monday through Friday at (717) 442-4544.
Wrought Iron

Over the centuries, wrought iron has been an important expressive material that reflects refined taste and character. The beauty of wrought iron is that despite its inherent rigidity and strength, it can be molded into graceful and elegant shapes. Iron possesses beauty that never dies; it is as charming today as it was a hundred years ago. And will remain so a century into the future.

The possibilities for expression in iron are unlimited. Iron can be turned and twisted into innumerable designs and textures to achieve the artist’s and client’s desired result. By working closely with designers, architects, and clients, unique expressions can be incorporated into the final design for the very essence of bespoke craftsmanship.

Using iron also makes a “green” statement. All the solid iron and aluminum bar stock we use is 97-100% post consumer recycled material. As stewards of our planet, we need to protect our earth’s resources. By recycling old appliances, cars, and buildings, we repurpose existing materials into new and exciting ornamental iron products that will maintain their beauty and value for decades.

Enduring Finish
The integrity of the protective coating (or “finish”) makes it possible to admire the work of past masters today. We treat our products with the most durable and resilient powder-coating so your iron masterpiece may be admired for ages to come.

The process starts with the materials. We use top-quality solid bars—not the thin wall hollow tubing pickets used for mass-produced fences. After the material is forged, welded, and fabricated to our client’s specifications, the all-important finishing process begins...

First, the entire project is sandblasted to remove all mill scale, dirt, and residue. This step also performs another important function: physically opening up microscopic pores in the metal in preparation for the powdercoat. The next step is a hot phosphate bath followed by two clean water rinses. Next, we apply the actual finish, starting with a zinc-rich epoxy primer. Then, the entire project is heated, melting and partially curing the primer onto the metal surface. While things are still hot, the first top coat is applied followed by a second and final finish coat. This last coat is treated to a long, slow pass through a curing oven to bake the powder to a specified hardness.

The entire spraying process is more than 99% efficient, and all leftover spray is reclaimed and reused. Our facility exceeds EPA and DEP requirements.
Our master craftsmen are all natives of the Pennsylvania Dutch heritage found in Lancaster County, Pennsylvania—an area known internationally for its impeccable craftsmanship and superb work ethic. Our craftsmen work as a team to design, measure, create, powder-coat, deliver, and install your project in an effort to make your entire Ironworks experience surpass your expectations.

We take pains to ensure that the overall design fits your taste and harmonizes with its surroundings. Another chief concern is meeting installation deadlines. As craftsmen of integrity, we do everything possible to make sure your promised installation is carried out on or ahead of schedule. Accurate measurements are taken onsite and, if needed, templates are made to ensure a perfect fit for the final installation.

Then, back at the shop we kick off the forging and fabricating. Detailed cleanup of the project requires scraping, grinding, sanding, and polishing to ensure visual cleanliness. The project is then pretreated and powder-coated right here in our facility for best quality control and ease of scheduling. For delivery, your iron is carefully wrapped for scuff-free transit to the site.

As we work, we keep in mind that our craftsmanship will be seen and evaluated for generations to come. We care about our clients’ complete satisfaction. There is no excuse for anything less.

Main Foyer Railings

An exquisite iron railing in a main foyer setting makes a statement of bespoke taste. Iron has the rigidity and composition to withstand decades—even centuries—of use and still possess grace and elegance when admired generations later.

There are many exquisite and famous homes, such as The Breakers and The Nemours mansion, that wonderfully showcase the dramatic effect of a fine iron railing. The end result takes an ordinary space and transforms it into a masterpiece.

Today’s architects, designers, and homeowners have more choices than ever before. While there are wooden and iron pickets that you can “stick and glue” for a cookie-cutter railing, the same space can be dramatized by incorporating a custom-forged piece of iron art—a piece of beauty to cherish forever.

But a word of caution... ironwork can be overdone. Well-designed railings are subtle, eye-pleasing structures that harmonize completely with their setting and surroundings. The result is an expression of your own design and taste that transcends time and will be admired for generations.

All components are forged in the USA, no import pieces
Hand-forged iron railing creates a statement that will transcend time
A banquet hall in New Jersey wanted to appeal to a more sophisticated client base. To achieve the goal, they went through a design process and evaluated the current trends. After their research, they determined a hand-forged iron railing would add elegance and beauty for each bride’s special wedding or each client’s important event.
The main stairway was renovated with the new iron railing. The ambiance of the space is a perfect setting for a couple’s special wedding event and a perfect photo backdrop. A gold highlight was added to the forged flower and acanthus leaves to highlight these details and as an additional benefit, the whole railing project was created with minimal environmental impact.

Terrace Case Study

A property owner in Bucks County, Pennsylvania, was building a custom swimming pool, cabana, and lounge area in his backyard. The swimming pool company overseeing the project contacted us to help with certain special needs. The railing design and color needed to match an existing railing, previously installed on the deck. There were difficult radii to match around stone columns and down curved steps, a raised and curved seating area, and additional railings on the back of the cabana. To complicate matters further, the client had planned an event that dictated when the project needed to be complete. Fortunately, we were contacted in time to meet the deadline. We researched the existing design and made custom parts that exactly matched the property. Accurate measuring and the use of templates resulted in a perfect fit on the challenging radii. The entire project was finished in a bronze baked-on powder-coating that had a stunning visual impact and matched the existing railing color.

Balconies

Balconies have been the salt and pepper of architecture for centuries. Just as a chef uses spices to enhance the flavor of a dish, architects use balconies to enhance their work. Balconies are a reminder of relaxing and stress-free times, and they have inspired intimate conversation since Romeo and Juliet!

Balconies can still accommodate modern-day Romeos and Juliets—or the head of the house in search of a relaxing spot to unwind. They remain as relevant in today’s architecture as they have ever been.

Current architectural vernacular uses “French” and “Juliet” balconies interchangeably, so we will attempt to explain the differences.

A French balcony is a railing mounted on an upper-story wall, usually in front of a window. The railing extends two to ten inches from the wall and has no floor to step onto. A French balcony simply gives the illusion of a small balcony as an extra architectural feature.

A Juliet balcony is a complete balcony attached to a structure. It has a floor and railing in a single package. Very careful consideration must go into engineering and mounting one of these because they are load-bearing structures. There are two main types of flooring available for these: an expanded metal “mesh” flooring, and a more old-world slatted floor.

A Romeo is a type of balcony that is naturally part of the main structure. It has the addition of a wrought iron railing along its outside edges—both to prevent falls and to aesthetically complete the architecture.
At the initial design meeting, the client desired a balcony railing that was more “feminine” in profile than standard balcony railings. She selected this design and we incorporated and executed the client’s vision. However, there were some serious code issues and metallurgy hurdles to overcome. Notice that the panels on the corners had to have the “feminine” profile vertically and be radiused horizontally to be fluid with the rest of the design. While one of our craftsmen grew his first grey hairs working on the project, the final product was revealed to our client’s thrilled surprise.

Commercial Railings

Quality service and creativity is not limited to the high-end residential market. For the commercial or institutional project that insists on quality, Compass Ironworks can deliver. Be it a restaurant that needs a custom theme built into its railings, a conference center that needs custom gates for crowd control, or a golf course that wants golf balls at the top of each picket, Compass Ironworks will make your project flow as smoothly as possible. We also count schools, churches, and shopping malls among our delighted clientele.
